

Client

Three Kings School, Auckland.
460 students.

Project requirements

Provide security for school premises from vehicles after hours.
Increase security and enhance safety around vehicles during school hours.
High traffic area during day.
Any solution must be completed in limited space.

Warner recommendation

Double sliding gate system able to be placed within space constraints.
Entry wired to school office with communication to gate via intercom.
Exit using exit sensor.
Highly durable, long-life motors.

Installation

Sliding gates set back allowing cars off road and ensuring driver safety.
Top of gates are level while the bottom of the fence and gates follows land contours.
Asphalt driveway unsuitable for automatic gate track. Asphalt section removed and back-filled with concrete, track laid on top.
Warner project management and entire installation.
Installed during school holidays to avoid disruption.

Outcome

Elegant solution easily accommodated within available space.
Delivered on time, to budget.
